

Productivity Accelerator

A Microsoft 365 focused service that aims to support you and your team through your digital transformation journey.

Digital transformation and improving efficiencies to gain a competitive edge is an evolving process.

With the digital world moving at pace, many companies have not yet been able to exploit the technologies and services they already use.

Productivity Accelerator from BCN provides insights on better use of existing technologies and services and takes an in-depth look at how employees use them.

The insight and expert advice you need to improve

See if you are using the products and services fully, and if not we can show you and your staff how to.

A dedicated consultant and Productivity Accelerator Team will work with you to keep the momentum going and ensure your staff thrive, as well as making it a safe and secure experience.

We also generate reports that typically include data on the number of active users, frequency of use, and usage patterns over time.

These reports provide powerful information to:

- Identify popular features and areas for improvement
- Track adaptation of new features and services
- Monitor overall use of Microsoft products and services

Service includes:

Two hour monthly consultation with our Productivity Accelerator Team to enhance productivity.

Half a day of engineer time for tenant-wide changes, enhancing productivity.

Usage and adoption report updates every six months.

Microsoft usage reports

Common examples:

Microsoft Teams Usage Report

Microsoft 365 Usage Report

Exchange Online Usage Report

Note: Access to these reports and data they contain may be restricted based on the licensing agreements and configuration of an organisation's Microsoft products and services.
