Cyber Security:
Every Second Counts

In the world of cyber security, every second counts. With the ever-increasing sophistication of cyber threats, the speed at which organisations can detect, respond to, and mitigate these threats is critical. Fast detection and reaction can make a big difference between a minor security event and a major data compromise leading to disastrous consequences for your business.

Metrics matter:
From hours to seconds with Microsoft Defender

Here's how, by utilising the full capabilities of Microsoft Defender, you can reduce your risk and protect your business against 99.9% of threats in seconds.

What is Microsoft Defender?

An advanced threat protection service that provides real-time protection against cyber threats. It uses machine learning, behavioural analysis, and other advanced techniques to detect and respond to threats quickly.

Hours	Hours	Minutes	Seconds

1

Microsoft Defender

Protect against 60% of threats in hours

2

+ ASSESS Services

Expand coverage across your estate with products including vulnerability scanning. Protect against 80% of threats in hours.

3

+ Managed SIEM

Get a centralised view of event data and automate IT security notifications. Protect against 95% of threats in minutes.

4

+ Continuous XDR

Incorporate additional security from endpoints, networks and cloud environments. Protect against 99.9% of threats in seconds.
