

CloudGuard

Enterprise security for complex environments

CloudGuard delivers enterprise-grade security for organisations whose needs go beyond standard protection. Whether that's compliance, scale, complex infrastructure, or multi-cloud requirements. Powered by Azure Sentinel SIEM and AI-driven threat detection, it combines deep visibility with 24x7 monitoring to help you detect threats earlier and respond faster.

Who it's for

- Organisations with 500+ users.
- Security log retention beyond 12 months [compliance / investigation needs].
- UK-only data processing requirements.
- Bespoke apps needing SIEM/SOC log ingestion.
- Multi-tenant environments.
- Microsoft security-led estates [e.g., E5/E7 Defender users, or Business Premium environments].

What you get

- Azure Sentinel SIEM with hundreds of pre-built connectors for comprehensive log collection.
- AI-powered MXDR with 24x7 CREST-certified SOC monitoring and managed response.
- Threat intelligence enrichment to improve detection accuracy and speed.
- Ansel virtual assistant to support insight, triage and recommendations.
- Multi-cloud and on-premise support across Azure, AWS, GCP and on-prem.
- Full incident response capability, including Red Team and Purple Team exercises.

Why CloudGuard?

Built for complexity

Designed for environments where standard security packages don't meet enterprise requirements.

Round-the-clock cover

24x7 SOC monitoring with managed detection and response to reduce risk outside office hours.

Wider visibility, fewer blind spots

Coverage across multi-cloud and on-premise infrastructure from a single security view.

Key outcomes to expect

Clearer security posture

A centralised view of your security posture improves understanding of risk across your entire environment.

Faster incident response

Quicker triage and containment reduces the impact of threats when they happen.

Stronger audit readiness

Compliance and incident investigation are supported with consistent data and context.

Key benefits

- Faster detection and containment of security threats, reducing the time between identifying and responding to incidents.
- Greater confidence in data sovereignty, keeping sensitive data aligned with UK residency and regulatory needs.
- Improved coverage of bespoke applications, ensuring business-critical systems are included in security monitoring.
- Simpler compliance and audit readiness, supporting regulatory and investigative requirements with structured data and reporting.
- Complete visibility across complex environments, reducing blind spots across cloud and on-premise infrastructure.

Enterprise assurance

CREST SOC Certified

NCSC Assured IR Partner

CREST and NCSC certifications are held by CloudGuard, our specialist security partner.

Minimum 12-month term applies. Scope and price agreed during onboarding.

Why BCN?

Founded as a managed service provider, BCN is grounded in day-to-day delivery, keeping organisations secure, productive and supported. We're a leading Microsoft partner, and one of the first 35 globally to achieve Microsoft's Partner Designation for Support Services, recognising the strength of our service operations and our ability to support clients end to end.
